DRAX POWER STATION

MEGAWATT VALLEY

FIVE MILES SOUTH OF SELBY, YORKSHIRE

THURSDAY 31ST AUGUST

Reclaim Power

Take action against an economy based on fossil fuels. Join thousands of people converging on Drax power station on 31st August. Do what you can and do what you think is needed.

Climate change is the greatest threat ever to face humanity and it's happening now. Governments and big business dream of continued economic growth. They can't solve this crisis. We need to change the way we live: the solutions are local, they start with everyone of us.

Our current way of life cannot continue; the oil is running out too fast. If we wait any longer we won't be able to make the changes needed to survive.

Is our future to be war, famine, hurricanes, droughts and floods? Or can we create a new society based on co-operation and local solutions, a new world in the ruins of the old?

Drax is one of three coal power stations in Megawatt Valley. On its own it is the largest single emitter of Carbon Dioxide in the UK, emitting 20.8m tonnes a year: more than a quarter of the total CO₂ emitted by all Britain's motorists. Coal is the dirtiest way to make electricity and half of Britain's electricity comes from coal. Dwindling oil and gas supplies mean coal use is on the rise. The planet will be toast long before we run out of coal.

What are you waiting for...? Help us stem the tide of climate chaos.

Reclaim Power is part of the camp for Climate Action, 26th August - 4th September 2006, to create grassroots solutions to climate change through 10 days of actions, education, networking and skill-sharing.
